

It is a great new tool available at UAB to help get patients back on the road... It may also help avoid the estimated 4,000 - 8,000 crashes per year caused by distracted drivers as reported by AAA.

Some drivers are dealing with certain types of illnesses or they are elderly. Enter [the \\$100,000 driving simulator](#) at the [UAB Driving Assessment Clinic](#) funded in part by the [National Institute on Aging](#).

The interactive simulator allows for patients to be tested for 30 minute sessions using a 130° field of view and giving them an opportunity to experience several different types of driving conditions.
